# Northern Health Research Conference Learning Objectives

## **Overall Conference Learning Objectives**

- Assess and analyze research as it is applicable to their professional practice.
- Identify networking, collaboration, and knowledge exchange opportunities with researchers, health-care professionals, and Northern Ontario communities.
- Discuss the importance of employing research uptake in health-care practices.
- Discuss how researchers can contribute to the vibrant health research industry in Northern Ontario.

## **Pre Conference Workshop**

- Explain basic concepts and functions of research at NOSM.
- Discuss processes related to research at NOSM University.
- Advocate for the employment of research uptake in health-care practices.

## **Keynote Address**

# Northern Health Research Conference Learning Objectives

### Theme 1 - Cancer

- Describe current research in cancer biology, diagnostics and therapeutics.
- Identify strengths and limitations of cancer research.
- Assess and analyze research and potential impact on clinical practice.

# Theme 3 - Indigenous People's Health

- Assess research outcomes and the impact on Indigenous People's Health.
- Identify strengths and limitations of current research on Indigenous People's Health.
- Identify opportunities to apply relevant findings to daily practice.

### Theme 2 - Clinical Research

- Assess clinical research outcomes and the impact to delivery of services in medical practice.
- Identify strengths and limitations of clinical research.
- Assess and analyze research and apply relevant findings to daily practice.

# Theme 4 - Health Services, Population and Public Health

- Assess research on Public Health issues and the impact to delivery of services in medical practice.
- Identify the strengths, limitations and impact of Health Services, Population and Public Health Policies in Northern Ontario.
- Identify opportunities to apply relevant findings to daily practice.

# Northern Health Research Conference Learning Objectives

### Theme 5 - Medical and Health Education

- Describe current research as it pertains to medical and Health education and practice.
- Identify strengths and limitations of Medical and Health Education.
- Assess and analyze research and apply relevant findings to daily practice.

### Theme 7 - Biomedical Sciences

- Describe current research and its advancement in the field of biomedical sciences.
- Identify strengths and limitations of Biomedical Research.
- Assess and analyze research and apply relevant findings to daily practice.

### Theme 6 - Environment and Health

- Describe current research as it pertains to environmental health issues.
- Identify the effects and impact of environmental risks on health outcomes.
- Identify opportunities to apply relevant findings to daily practice.
